

# WeirWasher, ACS--External Trough

Notes:

1. Water flows from non-potable water system to inlet supply piping
2. Water inlet supply piping flows into the inner stationary ring, which is mounted on skids to compensate for column out of roundness
3. Outer rotating ring, which is mounted on skids around the inner ring, supplies water to the rotating piping mounted on foot skimmer.
4. Some supply piping attaches to the foot skimmer and then directs water to the spray apparatus
5. Rotating ring is driven by stainless steel chain attached to foot skimmer structure
